

## Succulents

### Description

I donâ€™t really have much to say about succulent plants other than the fact they are easy to maintain and I like them. I like the fact you donâ€™t have to water them much and they look really nice grouped together. Once the mid summer months hit in Kansas the idea of watering flowers becomes a chore I no longer enjoy. I also like the fact that not many people I know plant them in containers so they are something different than the usual begonias and geraniums that many people plant.

I love the quote “bloom where you’re planted” which is actually derived from the Bible. We sometimes don’t have a choice as to where we live or call home. When I start bemoaning the fact I don’t live close to an ocean this summer, I’ll think of the succulent plant and how it can thrive even in the desert.
